How are materials the same and different?

My description of materials in 2 cubes:

<table>
<thead>
<tr>
<th>Kind of Cube (oak, pvc, copper, etc)</th>
<th>Words to describe the material the cube is made of</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Here are two ways the materials in these cubes are alike:

________________________________________________________________________
________________________________________________________________________
________________________________________________________________________

Here are two ways the materials in these cubes are different:

________________________________________________________________________
________________________________________________________________________
________________________________________________________________________

Investigating Materials 3: How are materials the same and different?
