

Explaining the difference in compressibility of water and air

Make an annotated drawing to answer these questions:

- 1. How do you explain the difference in the compressibility of air and water?
- 2. What would you see at the microscopic level to explain what is going on?

1. Water compresses a little and air compresses a lot and then turns back to how it was before.

Explaining the difference in compressibility of water and air
